Scan for portfolio

Data Analyst with close to two years across healthcare and B2B/B2C trading, now running the analytics stack for a clinic network of 75 branches. I work the whole distance — pulling line-level transactions out of the source systems, modelling them in Power BI, then shipping the result as web tools the team opens on its own every morning.

EXPERIENCE

Data Analyst | Mithmaitree Clinic Nov 2025 – Present

FP&A department · 75 branches, 7 zones · 32 months of transaction history

- **Built the department's data pipeline** in Python and Power Query — consolidating line-level service records from several source systems, reconciling codes that never matched across them, and publishing analysis-ready tables the rest of the reporting sits on.
- **Modelled the warehouse as a star schema** in Power BI and authored the DAX measure layer, adding Calculation Groups so the team pivots between actual, target and YoY views without duplicating measures.
- **Shipped seven internal products** instead of stopping at reports — an eight-page performance dashboard, a daily branch report managers read in fifteen seconds, and a departmental portal with zone-level access control.
- **Scored the customer base with a look-alike model** distilled from actual buyers, ranking zones and branches for a high-value campaign and exposing the score breakdown per person so sales could challenge it.
- **Traced payment-right switching** across each customer's last four visits, and quantified behaviour with cohort, RFM and market-basket analysis — turning both into prioritised call lists the front desk works from.

Data Analyst | Leowood Intertrade Jul 2023 – Apr 2024 · 10 months

- **Owned the recurring B2B and B2C sales reporting cycle** from daily through annual, validating every figure before it reached the management table.
- **Built regional KPI reports and interactive provincial dashboards**, compared targets across channels to explain period-over-period shifts, and trained sales staff on data-entry standards to cut downstream corrections.

SELECTED WORK walkthroughs and live demos on the portfolio

Performance Dashboard — eight pages in one file: target vs actual, moving average, cohort retention, geography and waiting time.

High-Value Target Group — look-alike scoring across five zones, each score explainable down to the component.

Customer Segmentation & RFM (Python, R) · **Sales Performance & Profitability** (Looker Studio) · **Titanic Survival Prediction** (R).

SKILLS

Languages & Analysis SQL (MySQL, SQL Server) · Python (pandas, NumPy) · R (dplyr, ggplot2, caret)

BI & Modelling Power BI · DAX · Power Query · Star Schema · Calculation Groups · Looker Studio · Tableau

Techniques RFM Segmentation · Cohort Analysis · Market Basket · Look-alike Scoring · Regression · Decision Tree · Random Forest

Delivery Google Sheets · Apps Script (deployed web apps) · Excel & Pivot Tables · JavaScript · HTML/CSS · Web Scraping · Git

EDUCATION & CERTIFICATIONS

B.Sc. Applied Mathematics | King Mongkut's University of Technology North Bangkok Aug 2018 – Jun 2022

Data Analytics Bootcamp B12 — Skooldio · 4 months onsite + online, closing with a live project pitch

Data Science Bootcamp B10 — DataRockie · 6 months, 100 hours · scored 224/240

Hands-On Power BI · Power BI Essentials · Dashboard Design Principles · SQL for Data Analytics — Skooldio (19 certificates in total — see portfolio)
